Hi Tom,

Fall should be a good time for me, we can work towards a September schedule and see what happens. I would plan on using a Cat 966 and a water cannon to get the stuff off the barge. I have not calculated cycle times for the crane yet but if we are offloading relatively close by we could do one or 2 trips a day of 1000 to 1500 cu yards I would think. Anyway I will try to spend some time on this as soon as I can. Please don't hesitate to call if you have a question.

Talk with you soon,

Dan Magone
